**Who needs  
hazmat training?**

Current U.S. Department of Transportation (USDOT) regulations require training (and retraining) of all employees who perform work functions covered by the Hazardous Materials Regulations (HMR; 49 CFR Parts 171-180). Any employee who works in a shipping, receiving or material handling area or who may be involved in preparing or transporting hazardous materials is required to have training.

**How can this new  
training be used?**

This training program may be used to meet the General Awareness/Familiarization training requirements or may be used as the basis for developing a function specific training program. With CD-ROM training modules, you can individually train your employees without disrupting your operations. You can train employees as their work schedule permits and allow them to learn at their own pace. Students can adapt the training to their needs by repeating lessons they find new or complex and by moving quickly through lessons that they understand. The CD-ROM allows you to maintain a permanent record of all users and the results of their testing. The CD-ROM training will not replace a course taught by an instructor. In fact, the CD-ROM supports the course by providing files for creating transparencies which may be used for group training presentations. Instructor and student manuals (including tests and answer keys) may also be easily printed from the CD-ROM.

**USDOT CD-ROM includes 8 training  
modules:**

- 1 - The Hazardous Materials Table
- 2 - Shipping Papers
- 3 - Packaging
- 4 - Marking and Labeling
- 5 - Placarding
- 6A - Carrier Requirements (Highway)
- 6B - Carrier Requirements (Air)
- 6C - Carrier Requirements (Rail)
